

Cutting edge design!

Model 220 Alpine Rescue pulk ART 403 – the very best in rescue equipment

This is the all-in-one pulk for effective rescue service organisations. Patient-friendly and functional on either Alpine slopes or snow-covered plateaux and equally effective in deep powder or on hard-packed snow. A wide range of accessories are also available.

This pulk is unique shaft system ensures easy handling. The shafts have been strategically placed at the pulks steering point and are flexible, allowing them to easily adapt to both skier and contours in the terrain. The shafts can be easily removed and replaced with a snowmobile drawbar, or just folded back over the pulk. The drawbar may be used by either one or two drivers.

Spacious, easily removable tunnel-shaped cover in watertight cordura protects the patient against the elements. Equipped with a practical two-way zipper and window.

Solid handles

ART 820

Replaceable runners provide optimal glide properties

ART 801

6 handles for carrying

Anti-swerve steering runners made in aluminium

The stabilising hull with protective head cover provides safe and comfortable transport. The hull is made of fibreglass-reinforced polyester optimal for use in varying temperatures, provides excellent glide properties and requires little maintenance. Exterior and interior cross-over straps for securing the patient. The pulk also has an insulating, closed-cell mattress.

ART 403 includes 220 cm pulk (58 cm width), two-man Alpine shafts, removable tunnel-shaped cover, interior and exterior cross-over straps, handles and insulating mattress. Weight 17kg. (25 kg incl. two-man shaft system)

The size and design offering room for both patient and large amounts of medical equipment.
